

Cooperate in a Social Responsible way

Leeuwarden, 1st of July 2011

Environmental statement

People

Stenden university hotel considers protecting the environment as a result of company processes as one of its most important goals. The protection of the environment and the reduction of environmental risks are the primary responsibility of the management as well as of every employee and student within Suh. The staff is obligated to perform according to the set procedures and the thereby formulated policy of the enterprise. The responsible parties execute the business operations in such a way, that the environment is protected. Stenden university hotel always takes the importance of the safety and health of employees and visitors in mind as well as educating every employee in a proper way. Besides, the hotel aims at being responsible by fulfilling the policy and to enable the employees in preventing barriers concerning continuous improvement of the environmental performance which is a must!

Profit

One of the goals of Stenden university hotel is to make profit and at the same time educate the students in having a sustainable attitude in which environmental involvement is visible. For every business objective the degree of environmental impact is taken into consideration. These standards are controlled by defined procedures, which result in improvement of the environmental policy. The management, employees and students are following the processes as they are set, which is resulting in profit caused by the execution and/or consumption of sustainable services and- or product.

Planet

To realize this environmental friendly policy, Suh is taking the following rules into consideration: Firstly, the services have to be delivered according to the expectation of our guests. When company- and commercial matters are visualized, the importance of the environment has to be recognized. Laws and regulations concerning environmental issues need to be taken into account and have to be met. Suh aims to minimize the waste that has a negative influence on air, water and soil due to the execution of operations by an effective environmental management.
